

Certification **REVIEW** and Test.

NATE Certification is changing the face of the HVAC industry for the better. Consumers are asking for NATE certified technicians, manufactures are printing the NATE emblem on their literature, contractors are looking to hire Nate certified technicians.

This is a **REVIEW** of the information you already know, but probably have not used in a while. There **is NO course** for the test, as it is a measurement of what the technician is supposed to already know.

The REVIEW will be one day, then the test the next morning. The review will cover the CORE material and the Air-Conditioning/Heat Pump specialty areas. There **will not be time** for any questions, as there is so much material to cover. However the passing rate for the test definitely has gone up for those who have attended the REVIEWS before taking the test.

****** YOU MUST TAKE A CORE AND A SPECIALITY EXAM TO BECOME CERTIFIED******

For the test on the next day, be well rested and **you MUST be on time.**

On the test day, Late arrivals **will not** be allowed to test!

YOU MUST BRING A CALCULATOR ON TEST DAY
